

# How To Win In The Digital World of Retail

Leveraging consumers as co-developers to  
deliver novel mobile applications

Nick Lansley

Head of R&D

[www.tesco.com](http://www.tesco.com)

# \* Better Simpler Cheaper

\* We think:

\* “How can we make the experience **better** for the customer?”

\* “How can we make tasks **simpler** for staff?”

\* “How can we make processes and systems **cheaper** for Tesco?”

\* We don't think: “let's innovate!”

# \*The Current Online Grocery Shop

- Ordering between 40 and 70 grocery items takes up to an hour.
- Placing orders once a week or once a fortnight.
- Can't get excited about much of it!
- Groceries are mainly 'non-aspirational' products (e.g. toilet rolls, baked beans).
- Perceived as long and laborious task!

# \*The PERFECT Online Grocery Shop

- To bring about a **step change** in the customer experience online for grocery.
- To aim towards **effortless** grocery shopping.
- Move from long-and-laborious shopping to **little-and-often** shopping.
- To bring grocery home shopping to all kinds of **internet-connected devices**.
- To enable **3rd party websites** to offer the customer the ability to add groceries straight to their Tesco.com basket.

# \*The Current Online Grocery Shop

- Ethnographic research resulted in defining our customers into three profiles:
  - Hunters
  - Gatherers
  - Groundhogs

# hunter

## shopping profile

Hunters shop from a wide variety of sources and are most engaged at the planning phase of the shopping process.

## gatherer

### shopping profile

Gatherers may have a loose plan, but mostly rely on the store to inspire them.

They are most engaged at the navigating & selecting phase.

I don't know or can't remember what I want

I go to the store and get inspired, I also get reminded of what I need

I pick from a random and wide selection

# groundhog

## shopping profile

Groundhogs rarely have a plan and don't have the time or patience to navigate the store.

They rely on previous orders/recently bought items and are most engaged at the ordering phase.

My shop is always the same. I repeat the same list of items

...which I buy from the same place

Tesco / any one other

# \* Collaboration and Inspiration

- Customers in our ethnographic study were **COLLABORATING** with members of the family to guide them in decision-making
- They were getting **INSPIRATION**:  
Advice, recommendations and requests of their family, friends and trusted sources (perhaps a TV Chef, a magazine forum or Tesco).

# \*Ordering process

# \*The Whole Picture

# \*The List Concept

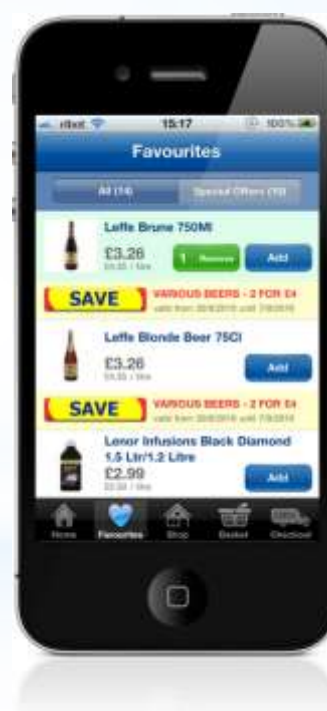

- A system of evolving lists from basic ideas (e.g. in the “media inbox”) that become more definite and detailed (actual products) as the customer moved deeper into the Tesco experience.

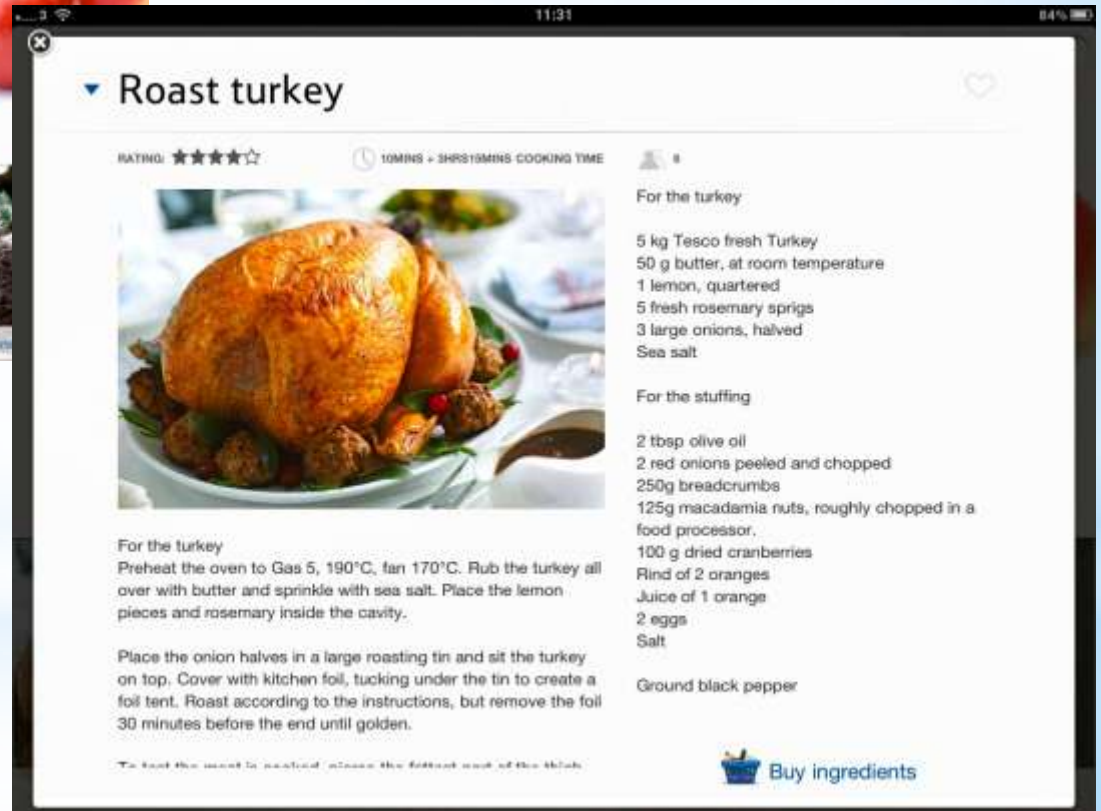

# \*How are we getting there?

- We've built mobile applications that can do everything from 'capture the moment' right through to a full grocery shop:

# \*How are we getting there?

# \*How are we getting there?

- We're taking our online services to an International audience.
  - Already in Republic of Ireland and South Korea
- We are simplifying the picking process for our staff by moving to warehouse-style picking with lots of automation but still with the human touch.
- We've created an Application Programming Interface (API) that gives full 'app' access to our grocery platform.

# \*How are we getting there?

- We've given access to a third party developer community who are building apps:
  - Mobile phones
  - Recipe sites
  - Facebook recommendations.
- Why do this?
  - We don't have a monopoly of the best ideas!
  - New ideas will evolve from older ones,
  - Developers incentivised to create 'best of breed' apps through affiliates programme.

# \* STOP! You're putting 3<sup>rd</sup> parties between your brand and your customer?!?

- YES!

- We have the catalog of products and the means of transacting with the customer BUT we don't have the all the best ideas - incentivized 3<sup>rd</sup> party developers will!!
- Process of evolution - better apps will evolve from earlier apps, removing weaknesses and building on strengths of predecessors.
- These can be apps, web sites, TV widgets, special tablet applications, *anything!*

- BUT:

- Customers only register via our web site - we own the start of the relationship with the customer.
- We take payment through our web site using various mobile versions of our payment page.
- We pick / pack / deliver the goods, so we have the relationship at the customer's front door.

- **Better - Simpler - Cheaper!**
- To aim towards **effortless** grocery shopping.
- Move from long-and-labourious shopping to **little-and-often** shopping.
- To bring grocery home shopping to all kinds of **internet-connected devices**.
- To enable **3rd party websites** to offer the customer the ability to add groceries straight to their Tesco.com basket.

## \*Recap: The Innovation Journey
